

TELUS Mobile VPN Plus

Today's business issues

Mobility is good, productivity is better. To be truly effective, mobile workers require secure, continuous connectivity to networks, applications and information over a variety of networks. A successful mobile deployment empowers mobile workers with the resources they need to be effective – resulting in faster business transactions, improved customer service, and increased revenue.

Designed for mobile and wireless environments

At the centre of a successful mobile deployment is a Mobile Virtual Private Network (VPN). Only a mobile VPN is designed to deal with the unique challenges associated with mobile computing such as wireless security, performance and roaming. Unlike legacy SSL and IPSec VPNs that do not perform well in wireless environments, TELUS Mobile VPN Plus is built from the ground up for mobile and wireless environments. It is specifically designed to deal with wireless security, coverage gaps, roaming, performance and handheld device support.

With TELUS Mobile VPN Plus, you can connect to your organization's secure applications from anywhere within the coverage area, then move throughout the TELUS EVDO network coverage area, switch to a Wi-Fi hotspot, or even travel across the country to later reconnect to the TELUS EVDO network – all without ever needing to close your applications. You have a secure, reliable connection to enterprise applications to keep you, your employees, and your organization productive.

TELUS Mobile VPN Plus provides:

- Application session persistence among networks
- Wireless device performance optimization
- Seamless roaming
- Mobile worker network access control
- Local administrator management
- Standards-based security

Best-in-class Mobile VPN

TELUS Mobile VPN Plus is an easy-to-deploy client/server software solution that helps minimize costs and complexity. It delivers key business benefits:

Reduced investment risk. Avoid up-front fees and the capital investment restrictions. Add-on mobile workers as required by your business and pay a monthly subscription for your service with your TELUS wireless service. This is a monthly subscription service with no initial investment.

Easy to install. TELUS Mobile VPN Plus deploys in hours, without custom software development or expensive application rewrites. As part of the service, one of our sales engineers will work with you every step of the way to ensure a quality deployment.

Easy to use. Downloading TELUS Mobile VPN Plus to a laptop or to a Windows Mobile smartphone is simple and takes seconds – no configuration or training is required by your mobile workers.

Easy to manage. Even the largest deployments are easily managed through a single, centralized management console that lets administrators create rules, conditions and policies that are enforced automatically for each mobile worker. TELUS Mobile VPN Plus is integrated with other TELUS services, so your organization receives a single bill for all TELUS services.

TELUS Mobile VPN Plus

Fast, reliable connection

TELUS Mobile VPN Plus searches out the fastest available network and connects to the one with the most available bandwidth for optimal performance. Unlike other VPNs that require a separate login step and force users to re-login every time they lose connectivity, the TELUS solution provides single sign-on authentication with standard Windows® login credentials. Your mobile workers will save valuable time as they traverse networks and coverage areas.

Protect networks and data with standards-based security

TELUS Mobile VPN Plus is certified with RSA SecurID two-factor authentication and supports NTML and RADIUS authentication protocols to protect networks from unauthorized access. All network access and data transmissions are secured through the VPN tunnel – to and from mobile devices in the field.

Roam seamlessly across networks

TELUS Mobile VPN Plus maintains session persistence to your organization's secure applications as workers move between any wireless or wireline network connection. There's no need to close your application or re-log in to your VPN.

Run existing applications without modification

Any application that works in your current wired environment will run over wireless without modification, expensive development or upgrades. Even the leading SSL VPN solutions continue to suffer from application compatibility issues.

Maximize performance over wireless networks with data compression

Wireless WAN optimizations automatically reduce network consumption and improve throughput and application responsiveness, particularly over bandwidth-constrained or wireless networks. TELUS Mobile VPN Plus uses link optimizations to reduce the number of retransmitted packets, excess control information and other network "chatter", and dramatically improves throughput by compressing data and images.

Scale easily to meet the needs of your growing mobile workforce

Each TELUS Mobile VPN Plus server supports up to 1,500 concurrent sessions. Multiple servers can be pooled to support up to 15,000 concurrent sessions or 35,000 registered devices, and to provide load-balancing, failover and redundancy.

Even more control over productivity and security

Combine TELUS Mobile VPN Plus with wireless Connect Cards and/or Smartphone service on one TELUS bill. Pay a monthly subscription for your service with no up-front investment. Your service includes:

- **Policy Management control** provides centralized, flexible control over mobile productivity and security
- **Quality of Service** management tools use traffic classification and shaping policies to prioritize mission-critical applications regardless of network type.
- **Network Access Control** wizard and tools help you easily configure and deploy security policies in minutes, ensuring compliance by users
- **Dedicated set-up support** from trained sales engineers – from the first day of your evaluation
- **24/7 help-desk to help-desk** support from TELUS Mobile VPN Plus experts

GET THE BEST FOR YOUR BUSINESS.
