

# GeoTrac by TELUS

## Fleet Management solutions, wherever you are.

TELUS fleet management solutions are ideal for oil and gas, forestry, construction, mining and utility companies that need to protect field workers and streamline their operations. GeoTrac by TELUS uses in-vehicle installed GPS modems to provide real-time tracking of vehicle location. Cellular, satellite and dual-satellite options are available, which means you can have reliable network coverage wherever your fleet must travel.

### Cost-effective business benefits.

- **Increased productivity.** Route optimization helps reduce fuel consumption and increase vehicle utilization. GeoTrac by TELUS can also act as a mobile computing platform from the truck, providing the ability to deliver office applications and services to and from the field.
- **Detailed maps.** GeoTrac by TELUS provides the most relevant and detailed oil and gas road maps available. With energy industry detail such as pipelines, well batteries and facilities, these maps prove critical in vehicle location, routing and worker safety.
- **Increased visibility into your operations.** Gain valuable information with customizable reports. Set geographic perimeters (geo-fences) and be alerted when your vehicles enter or exit the area. Further analyze the reports to help you better manage your vehicle utilization, help increase profitability, and uncover additional revenue generating opportunities.

### Add-on options for hazardous environments.

We also offer an add-on option to help protect workers in hazardous environments. The Personal Safety Monitor is a lone-worker solution that includes an intrinsically safe no-motion sensor worn around a worker's neck. It connects wirelessly to the modem in the vehicle and helps defend against accidents in the workplace.

**Improved worker safety.** Gain peace of mind by knowing the location of your workers and making it easy for them to call for help. Ideal for companies that must comply with work-alone legislation. Improved safety also means direct savings to your bottom line through lower insurance premiums and fewer infractions such as speeding.

### Ideal for remote areas.

GeoTrac by TELUS pinpoints the location of each vehicle in your fleet using GPS and provides high-speed Internet right to the truck. It is a cost-effective, reliable fleet management solution for natural resource and energy companies:

- Rugged equipment for operating in extreme environments
- Exceptional coverage with satellite or cellular options
- Intrinsically safe devices and emergency response equipment for lone worker safety
