

TELUS Cloud Service.

TELUS QuickStart. The easy way to start using cloud services.

You have made the decision to move IT services to the cloud because it simply makes sense in today's business environment. But time is limited. Your own IT staff can't take too much time out from their busy schedule or lose focus on pressing business needs to manage the transition. Nor can you afford interruptions to business critical applications.

So how can you make sure your migration is as seamless as possible, especially if you are moving critical services like email? After all, that will probably also mean migrating calendars, contacts and other vital data your organization needs to keep operating. Plus you will have to reconfigure DNS records correctly to keep the flow of information smooth. The solution is simple. Choose TELUS QuickStart and let us help you do it, or even do it for you.

TELUS QuickStart: Setup assistance to help you get started.

When it comes to moving email, workspaces, servers or storage to the cloud, you want everyone on your team to understand what they need to do for a successful implementation. TELUS QuickStart services will make sure they do.

You'll be able to deploy your new TELUS cloud services without burdening your IT staff. TELUS will do the heavy lifting and train your administrators on using control panels and maintaining your services on an ongoing basis.

TELUS QuickStart provides a working session that includes:

- Application setup and configuration
- Ensuring your new services are set up to meet your needs
- Administrator overview and training
- Helping your team understand the capabilities of your new cloud solutions
- Migrating mission critical services like email

Why TELUS?

- Meet all your equipment, data, network, maintenance and support needs from a single source
- Consult with certified, dedicated professionals on design, installation, management and ongoing support for your entire solution, from the network to end user devices
- Access one of Canada's largest teams of skilled IT personnel
- Work with Canada's "largest managed hosting provider with...focus, commitment, and strong reputation"* and over 20 years experience managing IT for ourselves and our clients
- Have your services configured to your specifications and deployed faster, with less downtime and without burdening your own IT staff

Get QuickStart services for your TELUS cloud services.
